

INSTALLATION GUIDE (PC/MACOS manual install, NOT for STEAM workshop installation)

1. Download compressed/zip file from MediaFire, this is linked in the mod thread.
2. Uncompress file. The resulting folder will be called "MLB Historical Outlined for OOTP2026 - VX.X".
3. This folder can be place directly in your default "Logos" folder as its own subfolder. (see location examples below)

PC (Standalone): C:\Users\user_name\Documents\Out of the Park Developments\OOTP Baseball 26\logos

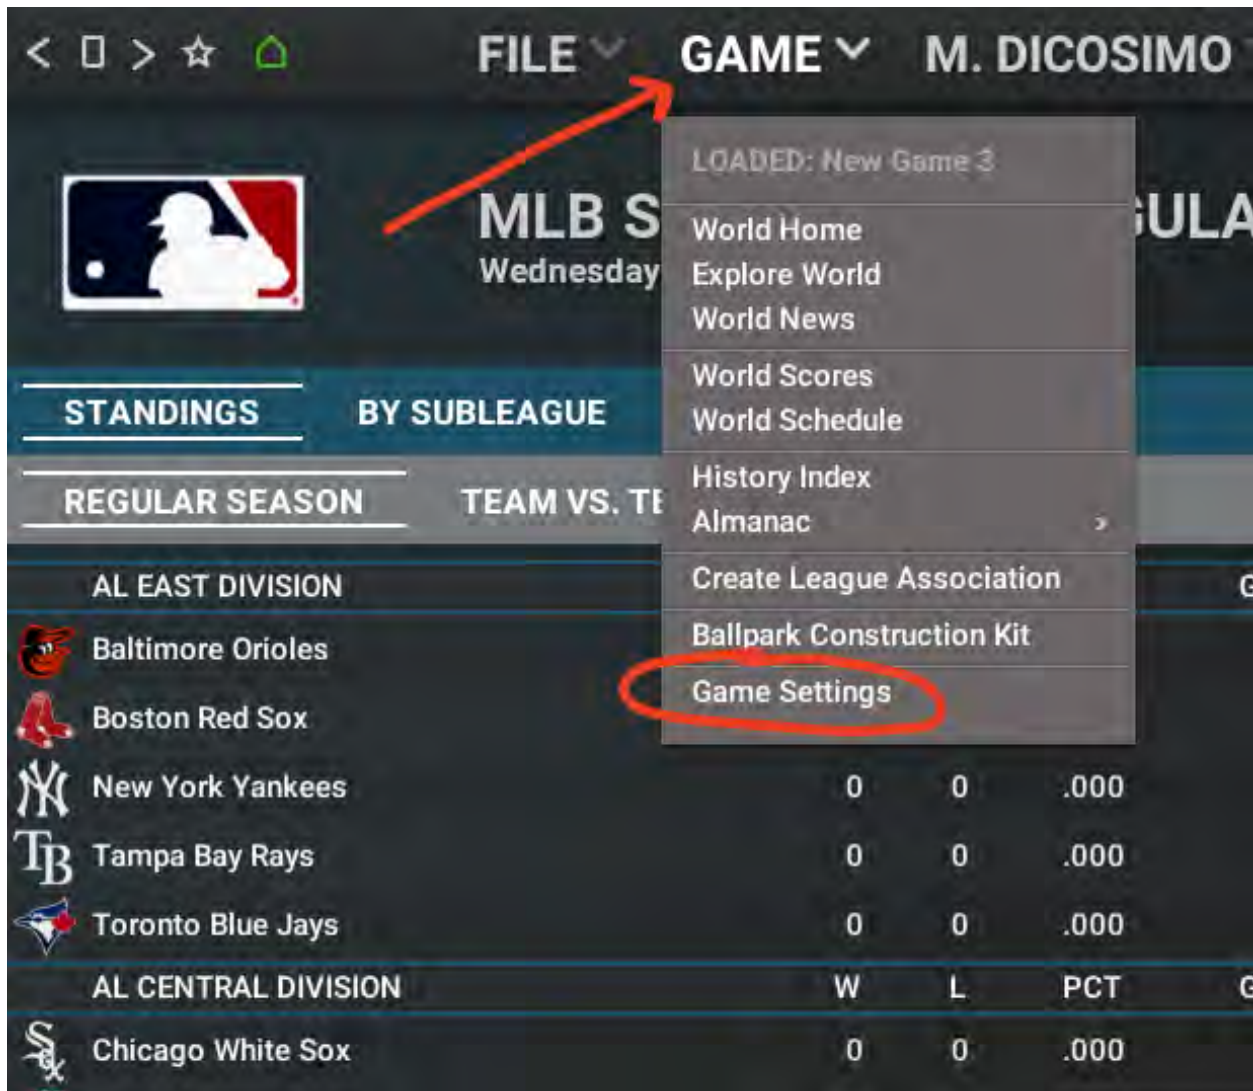

PC (Steam): C:\Program Files (x86)\Steam\steamapps\common\Out of the Park Baseball 26\data\logos

MacOS (Standalone):
/Users/username/Library/Containers/com.ootpdevelopments.ootp26macqlm/Data
/Application Support/Out of the Park Developments/OOTP Baseball 26/logos

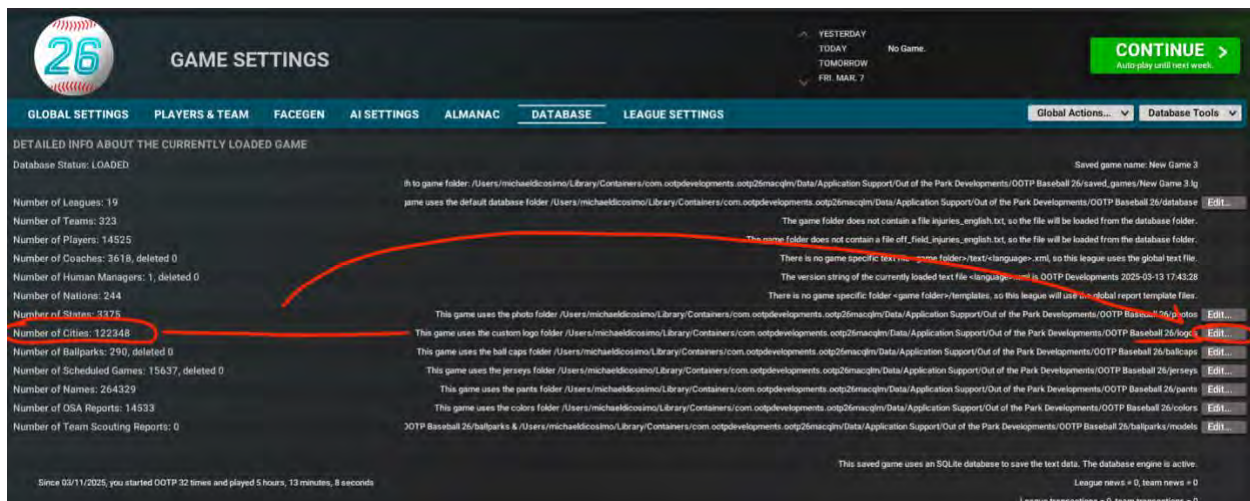

MacOS (Steam):
/Users/username/Library/ApplicationSupport/Steam/steamapps/common/Out
of the Park Developments/OOTP Baseball 26/logos

There are numerous ways to apply the logo set, but some can be complicated or require changing install data paths, or setting custom settings when creating a game. For simplicity's sake, the instructions below will apply AFTER you create a new game OR to an already existing save.

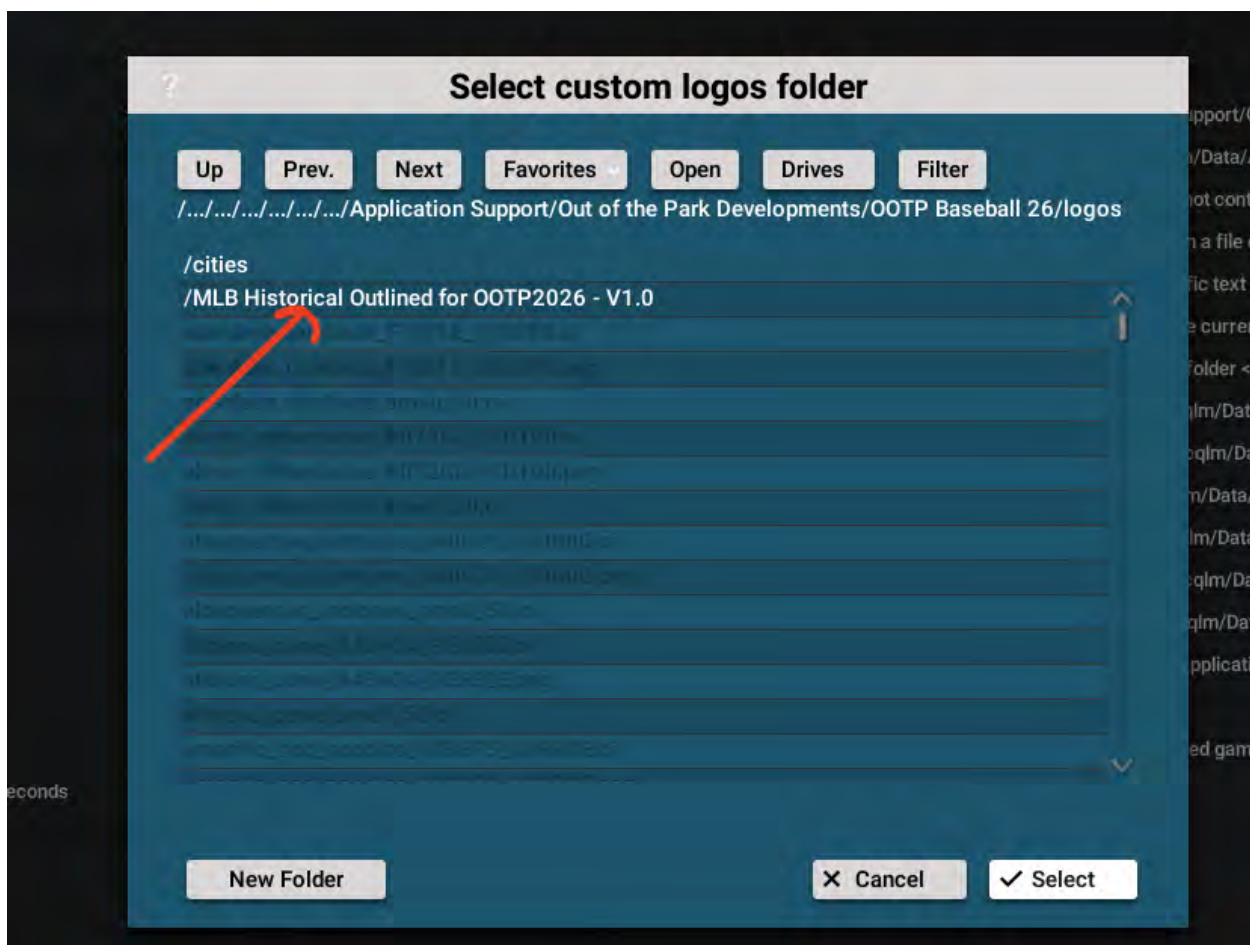

1. When you open up your Save (or just after your new save game is done being created) navigate to GAME -> Game Settings

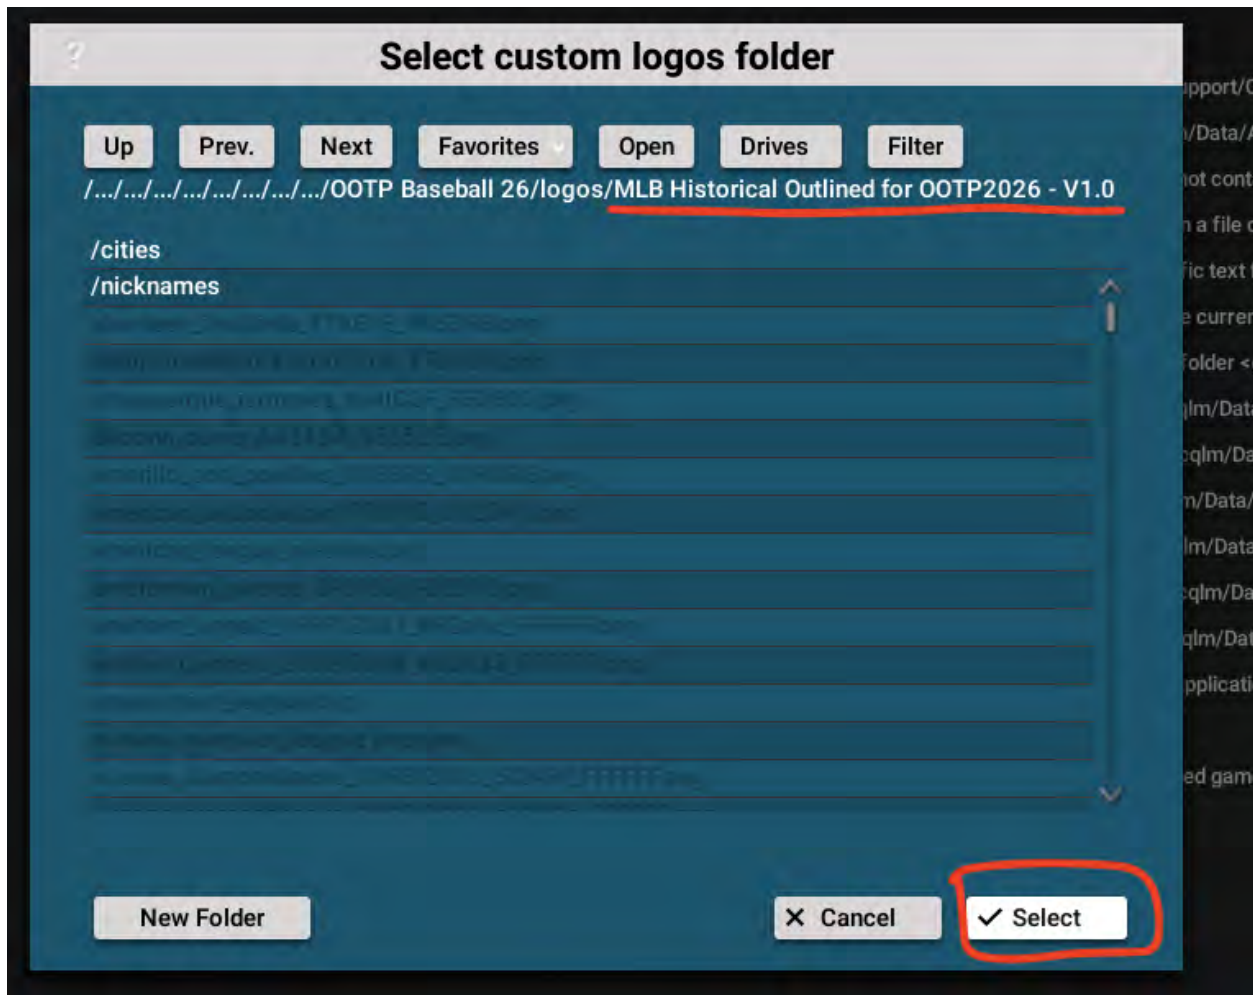

2. From the Tab menu select "DATABASE". You are going to click on the Edit button at the far right hand side of the screen on the line that begins with "Number of cities"..." and you can see the "...logos" path visible on the right side.

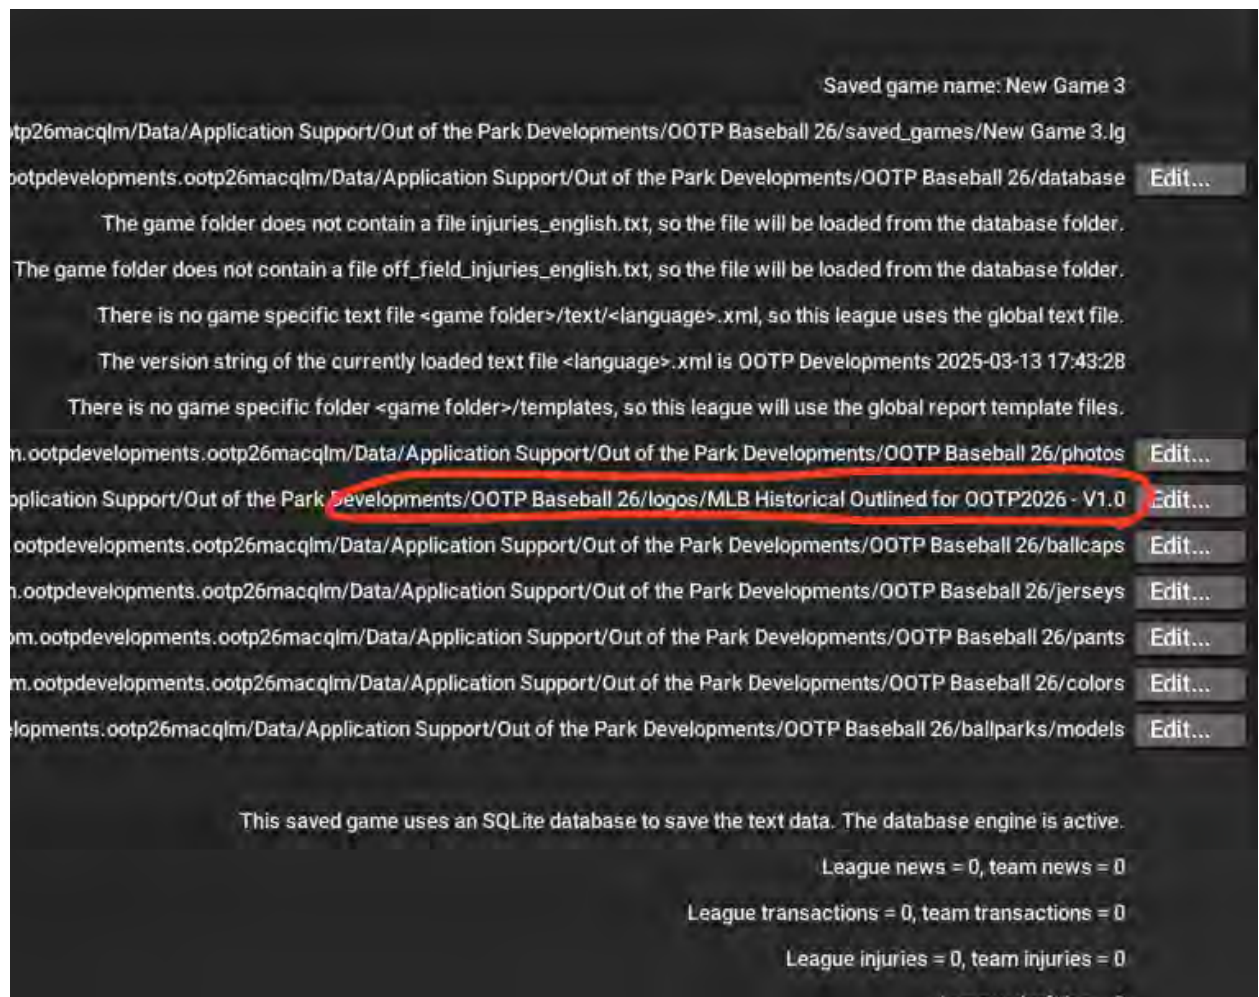

3. Now click once directly on the folder you moved to the "Logos" folder. When you click on it once, you will see the path above update to have it listed on the end of the path similar to "...logos/ MLB Historical Outlined for OOTP2026 - VX.X"
4. Once you see the path update, click on the SELECT button on the bottom right.

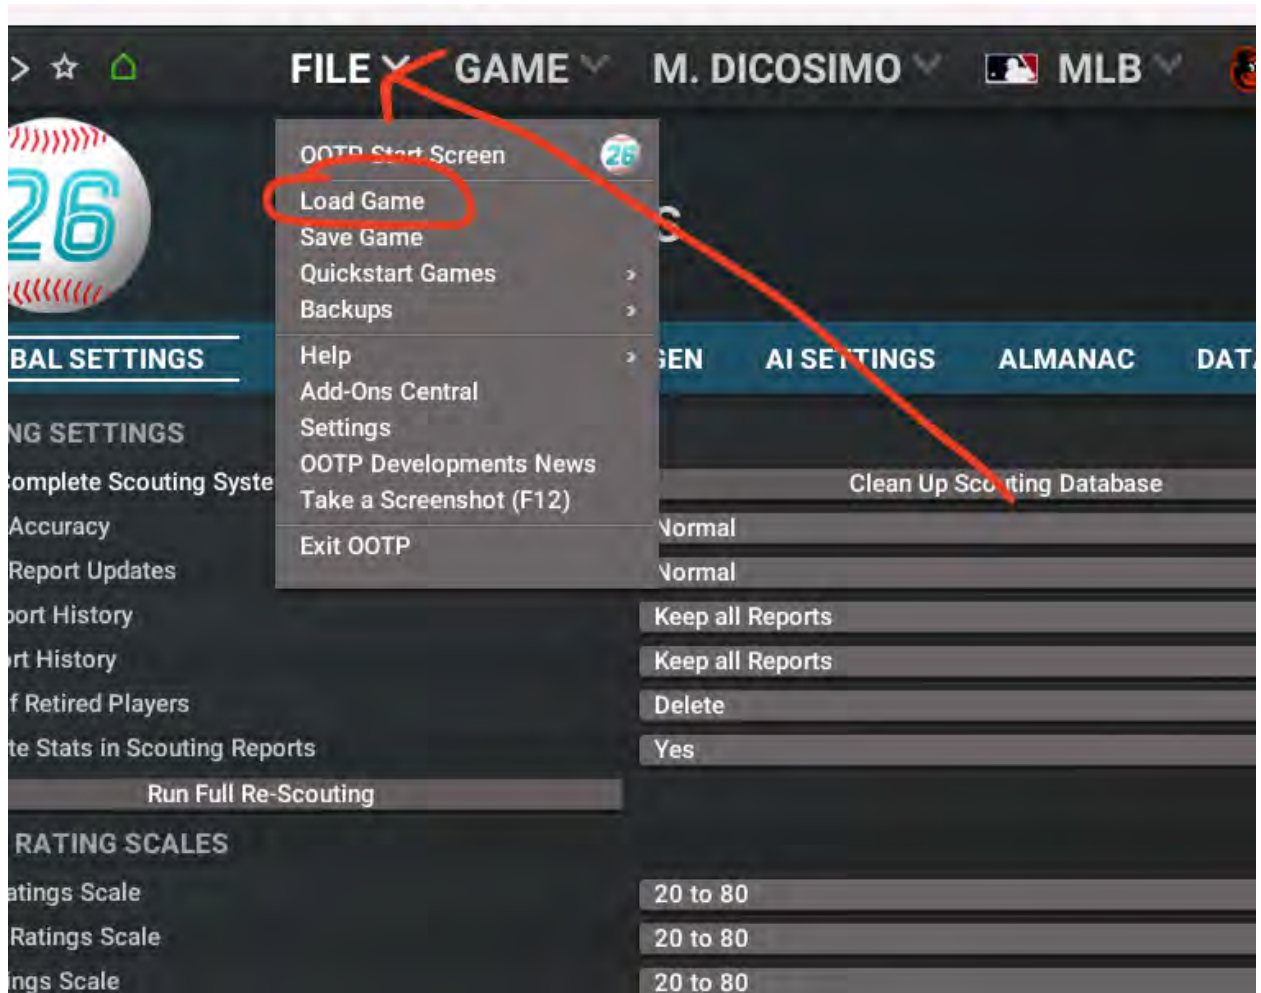

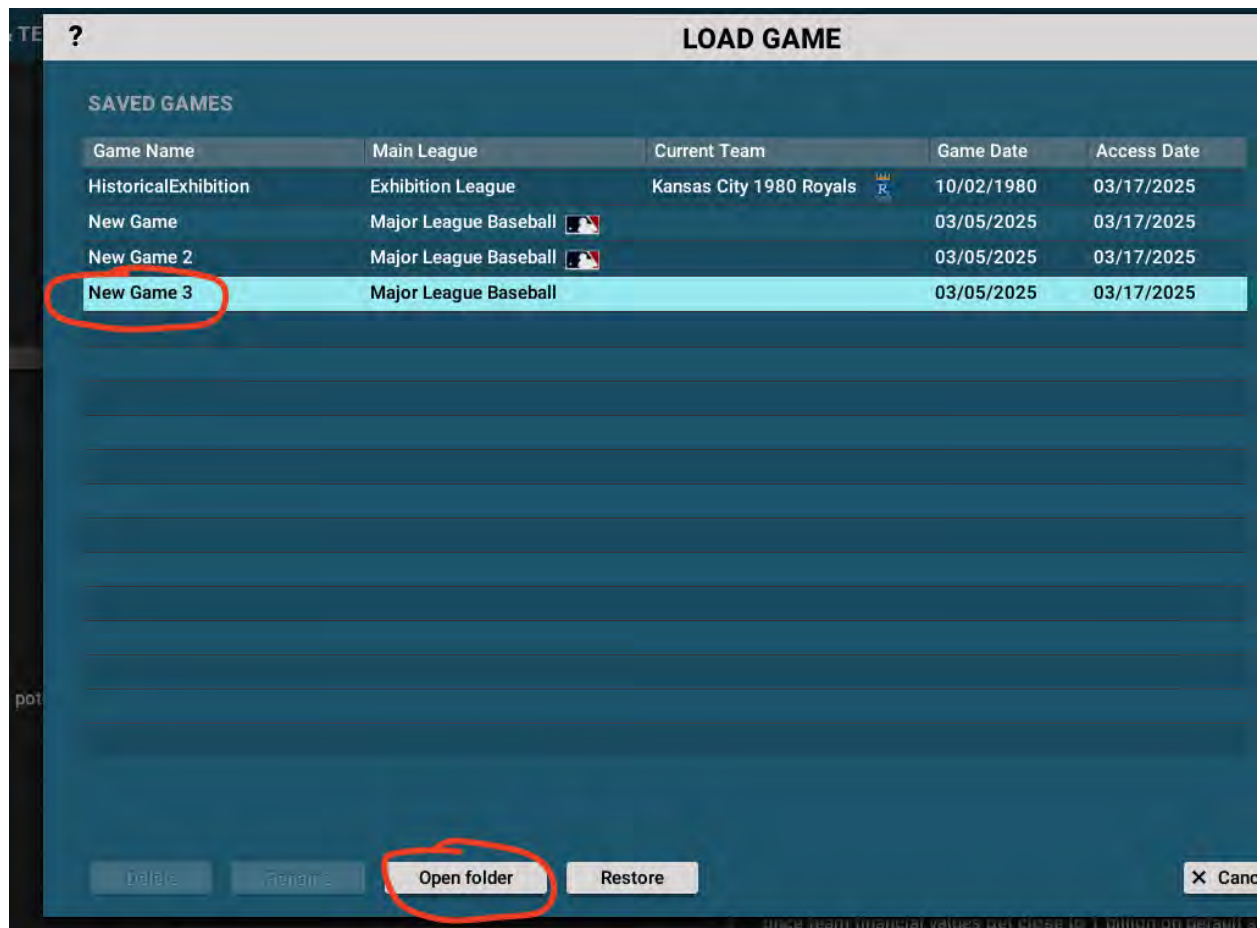

5. You can now see the path updated in the database screen as well.

6. Now go back up to FILE -> Load Game. In order to ensure our new logos will install with no issues, we will delete ANY logos already loaded by default. We will do this by going into our SAVE GAME folder and wiping out any existing League and Team logos.

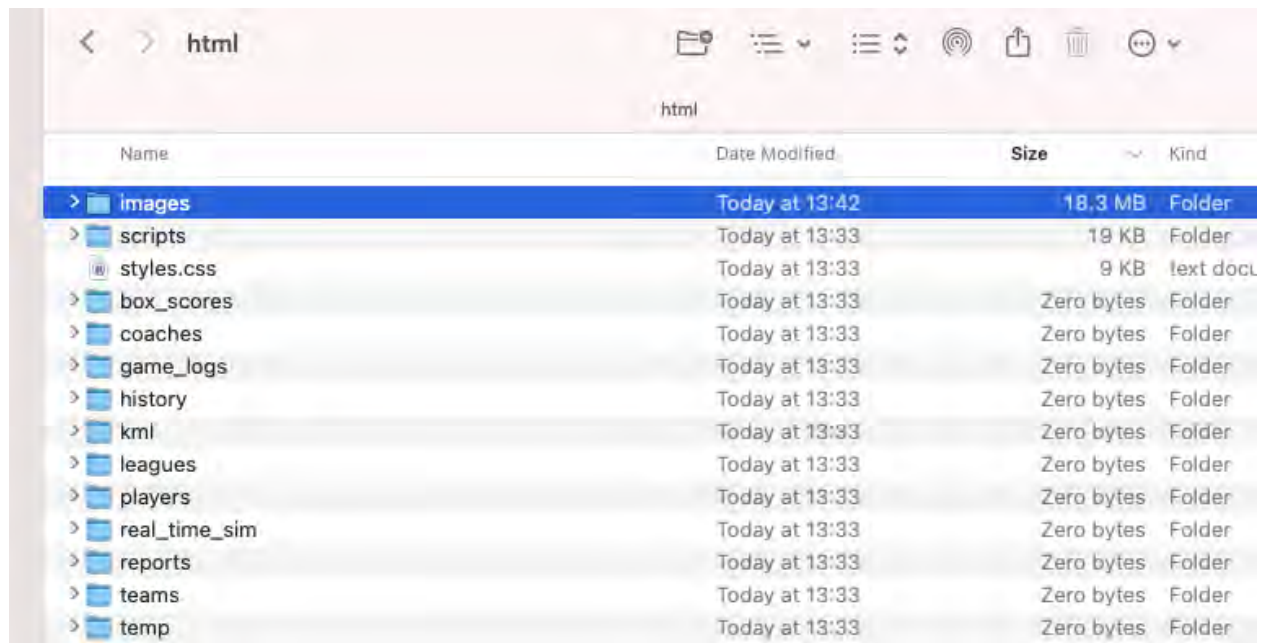

7. Highlight the current Save Game name, then select "Open Folder". This will open up the location for files related to your Save game.

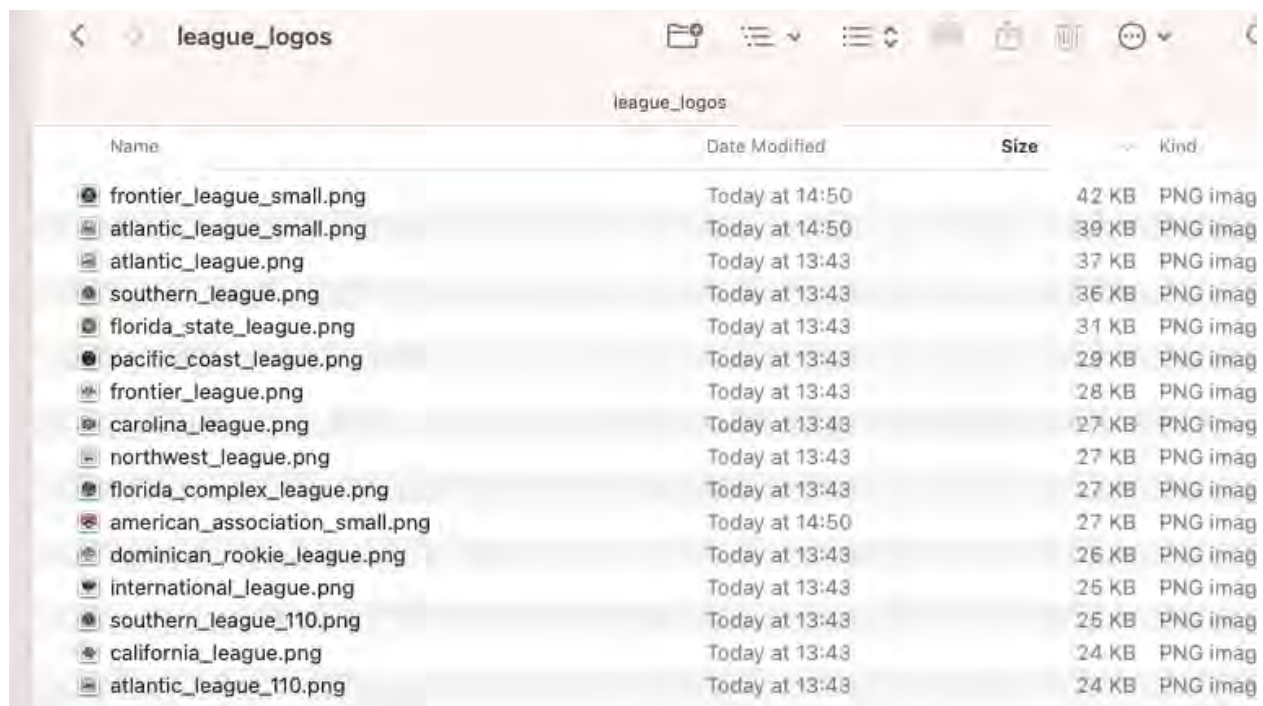

8. Now navigate to the "news" folder, then "html", then "images". (MacOS shown)

Name	Date Modified	Size	Kind
> html	Today at 13:42	18.4 MB	Folder
> txt	Today at 13:42	6 KB	Folder

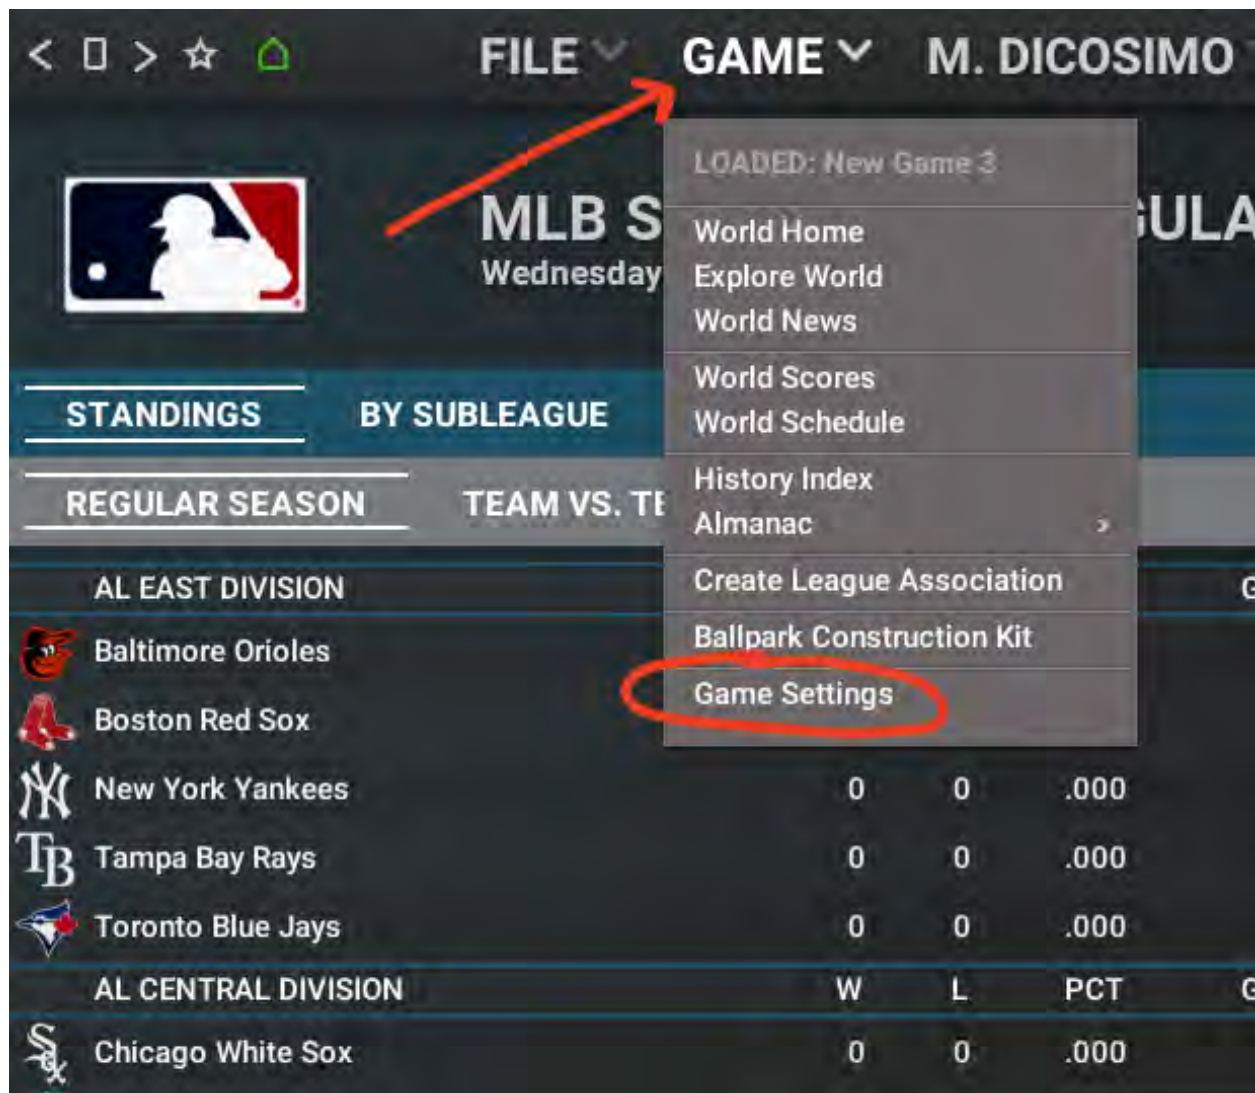

- In the "images" folder, you will need to delete the contents of both the "team_logos" and "league_logos" folders. NOT the folders themselves, leave the folders empty. This will not work if you delete the actual folders.

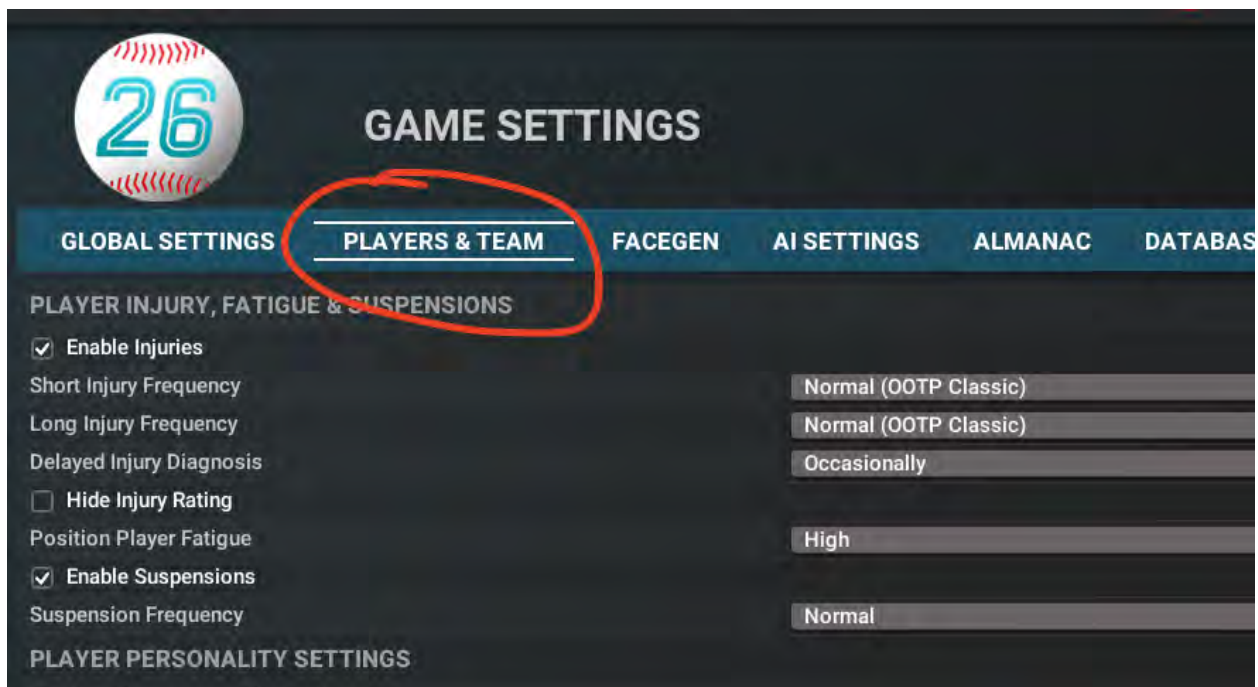

Delete all files and leave both folders empty.

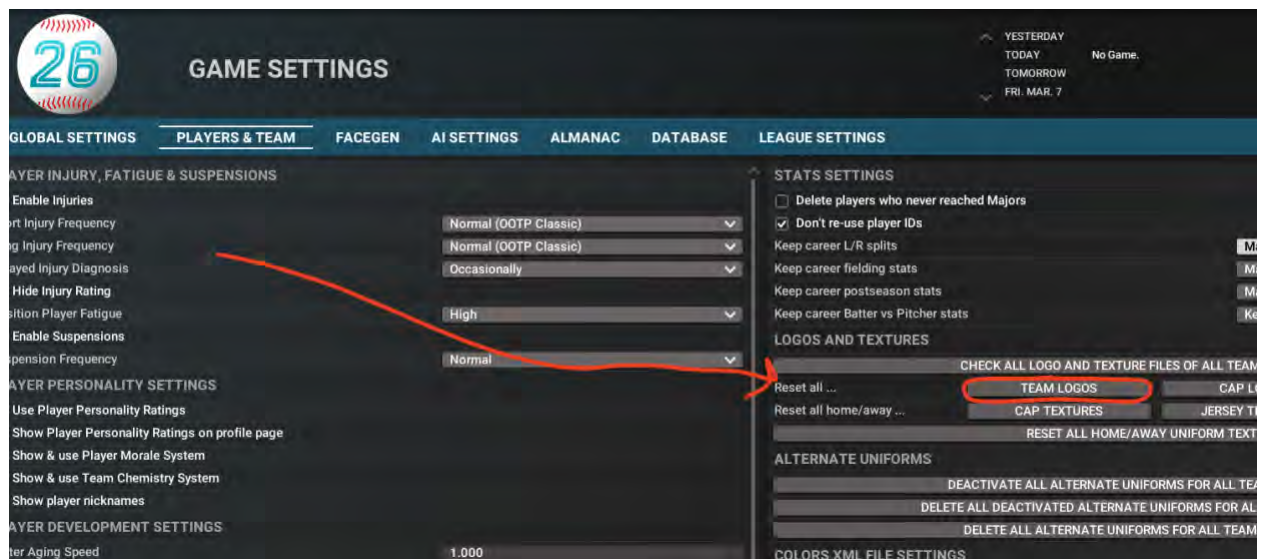

10. Back in the game itself, navigate back to GAME -> Game Settings

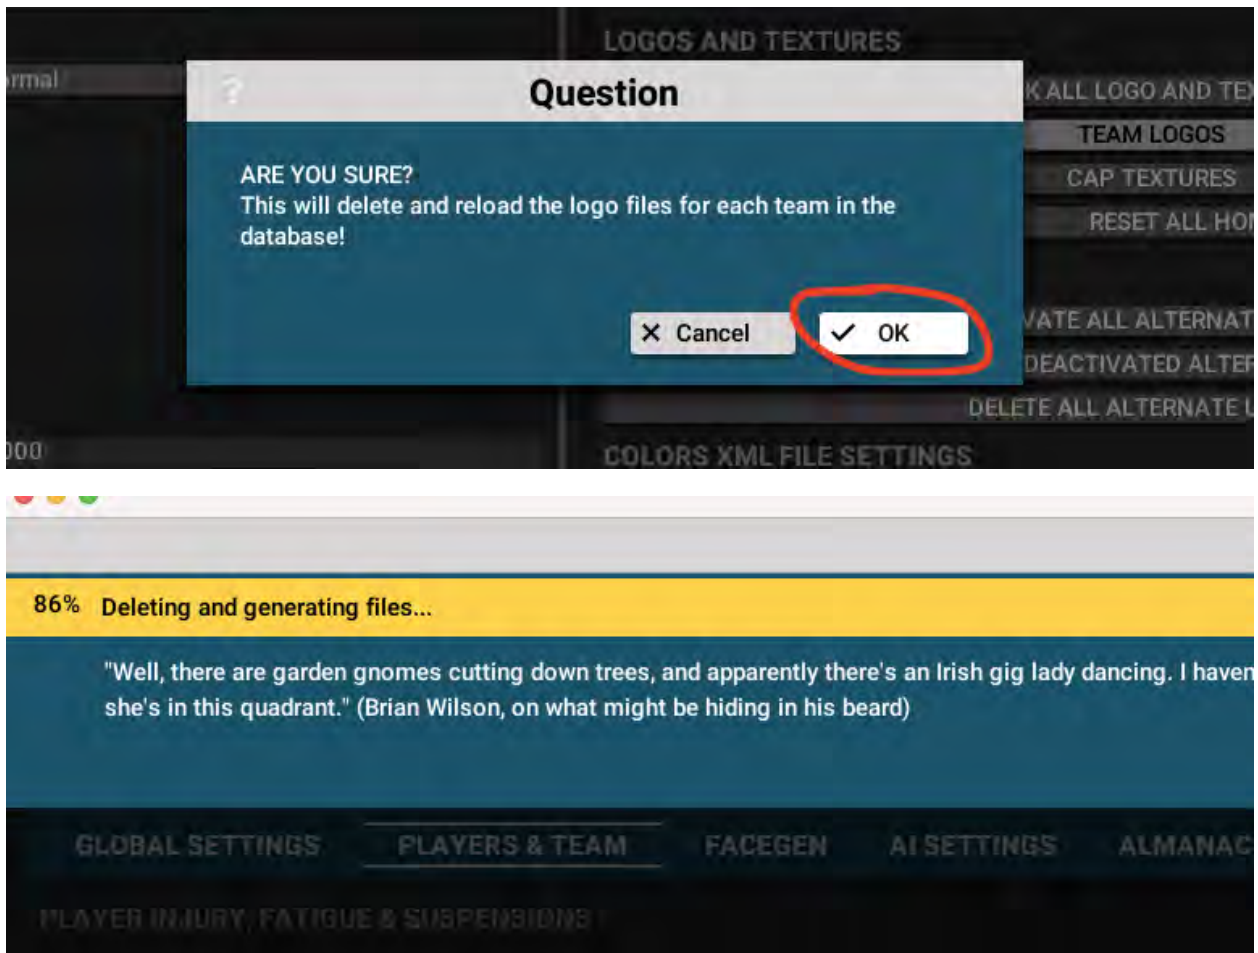

11. Go to the "Players & Team" tab on the menu

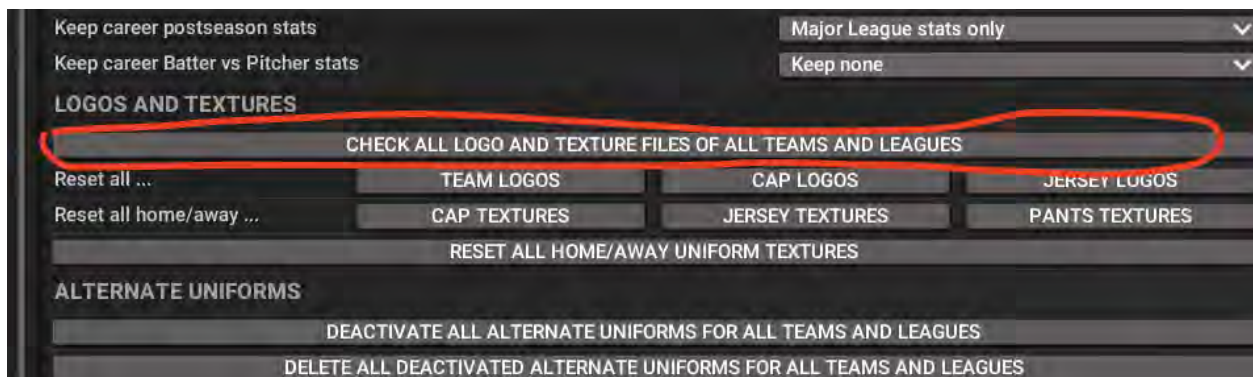

12. From here click on "Reset All...Team Logos:" on the right side of the screen.

13. Once it is done, then click on "Check all Logo and Texture Files..."

14. It will quickly re-update everything and should ensure you have all the new logos assigned with no previously assigned default logos.
